Introduction

RES aims at addressing on the priorities of promoting entrepreneurship and social entrepreneurship education through cooperation among countries affected by massive youth unemployment phenomena. This will be achieved by a concrete focus on Sport entrepreneurship, fostering entrepreneurial and social entrepreneurial empowerment and concrete transition from ideas to action in the field of Sport Entrepreneurship among youth, in combination with NFE methodologies targeting young people with a migrant background.

Project objectives:

- To provide a comprehensive methodology of empowerment and entrepreneurial development employing Sport methods, in connection with NFE methodologies, to provide young people with soft/transversal skills and attitudes forming essential part of a mind-set oriented to social business.

- Aiming at the development and concrete application of creative "ordinary" thinking through Digital Storytelling which is the most preferred in the development of entrepreneurial skills, competencies and attitudes, planning and communication skills.

- To use Self Branding Set of instruments and activities designed planning and development of own personal communication strategy (particularly on Social Media instruments) and acquisition of related digital competence in order to give a skills to target group.

and methodologies implemented)	 innovators and entrepreneurs on their journey to drive innovation in and through sports. To achieve this, we are creating a one-stop shop for all stakeholders and a seamless pathway from university incubation environments to international scale-ups. Our members and clients are on a mission to bring about positive societal change and breaking ground in the ways that sport is experienced by athletes and fans. Highly experienced in the development of sports assets through value and business generating activities and partnerships, we also provide expertise in the form of international advisory and consulting services at both strategic and operational levels. We place a special focus on solutions that impact the UN Sustainable Development Goals by harnessing the Nordic values and approach to a healthy lifestyle and environmentally aware, well-integrated, inclusive, socially and physically active communities.

Description:	We built Ratoong based on our love of skiers and
Detailed of	snowboarders - riders. Why? We want all riders to
the project/programme	have the best experiences at ski resorts. This is also the
(please specify the	reason we collaborate with ski resorts so they can keep
activities/sessions/modules	improving their ski area.
and methodologies	We want to make searching for your next ski resort
implemented)	easier, faster and more efficient than finding a good
_	hotel or restaurant. We want to make the rating of ski
	resorts easier as well, you can easily share your
	experiences using pictograms and snowflakes to rate
	20 different parameters such as the lift system, the
	scenery, the off-piste, etc.
	Future versions will include many more features. Most
	are based on requests from our beloved users – you!
	Others are developed by us and tested on users.
	Therefore don't forget to sign up and follow us on one
	of our many Social Media platforms.
	We are an independent company; not using
	commercials or favoring particular resorts, nor are we
	influenced by any economic interests - all we have is
	sponsors - world-known ski brands - offering
	equipment to our crew. We believe in giving and getting!
	It's fine if you use Ratoong just to search for your next
	ski holiday or next ski area to visit, but we hope you
	will also rate the ski resorts you visit, telling us and
	your fellow skiers about the experience and conditions,
	etc. We only ask you to rate 5 randomly chosen
	parameters. It takes less than 15 secs.!
	You can of course rate all 20 parameters if you would
	like, for all ski resorts you have been to, and give more
	back to our community.
	Ratings are simple; all you have to do is mark the
	number of snowflakes from 1 to 5 for the different
	parameters. 5 is always the best or most.
	Ratoong was started in 2017 by Eg Nicolajsen, who is
	a passionate skier and ski instructor, in the flat country
	of Denmark. Ratoong has its headquarters in a small

	fishing village north of Copenhagen with a view of COPENHILL.
	Eg wanted to build a platform that could inspire you to
	go to other ski areas than the ones where most people
	go. In many ways, we live in a time where people want
	to have unique experiences, but when it comes to
	skiing and snowboarding, 80% of people go to 20% of
	the biggest resorts that exist in the world. We want to
	change that to make people visiting resorts matching
	their preferences and not just because they are big!
	Secondly, Eg wanted to build a platform that could
	give users a objective take on a ski resort,
	supplementing those you get from a friend or review
	sites. Eg wanted to build a platform that delivers
	"wisdom of the crowd" objectivity, by letting millions
	of users rate.
Results achieved:	Support and growth of alrigated starting and
	Support and growth of ski-related startups and

Budget and Program which financed the project/programme		

Description: Detailed of the project/programme (please specify the activities/sessions/modules and methodologies implemented)	In Europe, there are a lot of minors at risk of poverty and social exclusion. The consequences of youth poverty are many, including violence, early school dropout and an unstable future, with no quality jobs. When the phenomenon affects a large part of the population, society becomes weaker, poorer, and more insecure. Practising sports activity has a significant influence on the development of young people: in physical, mental, social, and moral areas. Sport environment represents opportunities.

Final survey results

Denmark

The survey of the project had 9 questions. The first one was about if the participation of migrant youth find the sports activities sufficient. 59,3% of them answer yes, 18,5% no and 22,2% they don't have any idea about it.

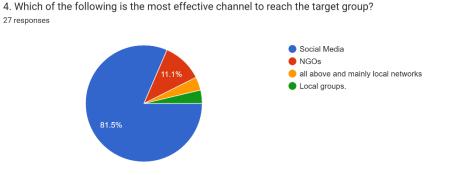

Then the target group answer if they have work before with the same target group and they answer 74,1% no and only 25,9% yes.

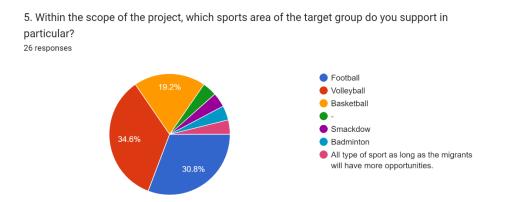

2. Did you work before with the same target group in the sport field? 27 responses

In the third question when someone answer yes asked to give more questions. And an answer said that they have one other project regarding the social inclusion and ethnic discrimination.

So that to reach the target group of the project most of them (81,5%) answered that they used the social media, 11,1% NGOs, 3,7% local groups and 3,7 all of the above and mainly local networks.

More specific, when the participants asked which sport do they support in particular 30,8% answer football, 34,6% volleyball and 19,2% basketball, Smackdow 3,8%, Badminton 3,8%. Again 3,8% answer All type of sport as long as the migrants will have more opportunities

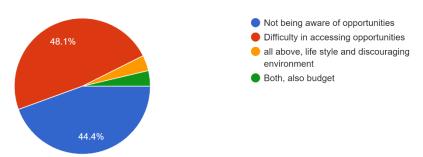

When they answered the question no.6 "how they can encourage people to take up sports that are not very popular" most of the answers were about advertising, open trainings, using the social media and organizing small tournament.

The next question was about the greatest benefits of increased participation of the target group in sport. Most famous answers were, inclusion, friends, health (mental and body), respect to the others and communication.

From the other hand in the question "What can low participation in sports lead to?" the answers were unhealthy life style/healthy issues, lack of self confidence, low social skills and poor teamwork skills.

9. What is the biggest obstacle of participation in sport? 27 responses

In the end as it is clear from the diagram above, in the question what the biggest obstacle of participation in sport is the answers were 48,1% difficulty in accessing opportunities, 44,4% not being aware of opportunities and 3,7% budget and 3,7% all of the above, life style and discouraging environment.

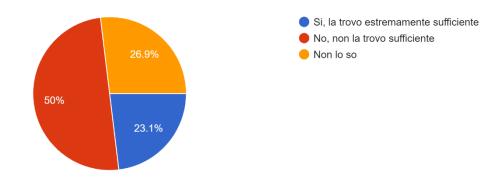

Italy

In this chapter there are the results of the questionnaire since it was carried out throughout the country representing the outcome of the fair knowledge of the people around in relation to sports engagements.

Participation of young migrants aged 18 - 30 in sports activities in EU?

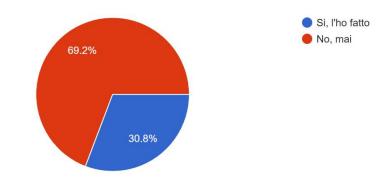

As per first question which was related to the sufficient involvement of youth between 18 - 30 in sports activities and initiatives, and very clear here is the outcome where you can see half of the participators declared (NO) as a non-sufficiency of participation and tiny less than a quarter believe Yes and the rest of not knowing which is a very hard indicator about the sport engagement in EU sports activities by either citizens of EU or migrants and refugees.

Do you think that the participation of young migrants between the ages of 18 and 30 in Europe in sports activities is sufficient? 26 responses

Direct interaction with the same target group in Sport?

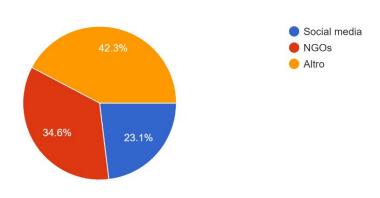

The indication is very simple of the direct interaction with the target group in the field of sport and as shown in the graph here, it is easy to indicate that 70% of the answers were negative which indicates and complementary to the first question knowing that it is not sufficient involvement of sports activities.

Have you already worked with the same target group in the field of sport? ²⁶ responses

The methods used to reach the target group

Indicated here the methods used to reach out to the target group and how can you communicate with them and out of the scale you can see that social media which is the main communication channel nowadays for the target group is the least communicated with them never the less much more than one third of the responses were with the direct interaction with the local and civil society NGOs.

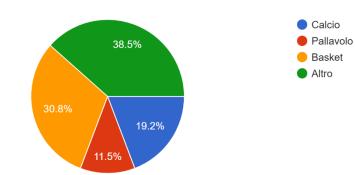

Which of the following is the most effective channel for reaching the target group? ²⁶ responses

Sports which get more interaction and being supported by the target group

Here is simple where it is indicated according to the responses we got, that basketball is one direct passion to our target group in Italy where the football didn't play the biggest role and this has been affected by lots of factors however, target group started to go out of the stereotype of sport that it has to be football due to the diversity in the ideas and promotions.

Within the framework of the project, which sports area of the target group do you particularly support? 26 responses

Difficulties of participation

The awareness was always there but as the outcome of the survey led to that most of the participators found it hard to access the opportunities which can be because of many aspects identified in the last questions which can be easily overcome by different approaches and more awareness. What is the biggest obstacle to participating in sport? 26 responses Non essere consapevoli delle opportunità Difficoltà di accesso alle oppo

Romania

Q1 - Do you think the participation of migrant youth aged 18-30 in Europe in sports activities is sufficient?

1. Do you think the participation of migrant youth aged 18-30 in Europe in sports activities is sufficient?

25 responses • Yes, I find it extremely sufficient. • No, I don' find sufficient. • I have no idea about this.

From the amount of 25 people that took our survey, only 6 gave an affirmative answer, thus meaning they believe the migrant youth is involved enough in sports activities, 4 people chose the option with "I don't know", perhaps not being sure of the current state of the situation. The remaining 15 people chose the last remaining option, thus meaning they believe that the migrant youth is not involved enough in sports activities.

Q2 - Did you work before with the same target group in the sport field?

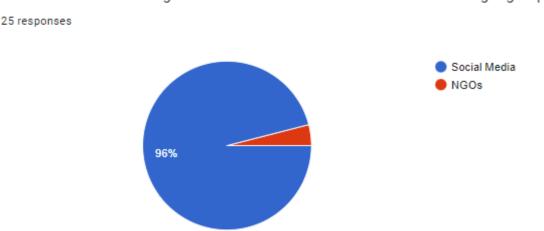

This question posed some concerns from the respondents, since some of them didn't directly or literally work with the target group. However, they did have some sort of

connexion with the highlighted target group. 7 of them have worked with the target group, whereas the rest of the group did not work or were not sure if their activity classified under the category of "working".

Q3 - If you worked before please give details.

Some of the respondents either have worked during martial arts classes, either during team sports such as football, either during dance classes. One person has facilitated 3 international projects on sports and healthy lifestyle for youth with various backgrounds, including migrant.

Q4 - Which of the following is the most effective channel to reach the target group?

4. Which of the following is the most effective channel to reach the target group?

Out of the 25 respondents, only one of them chose the "NGOs" option, leaving the rest of them with the "social media" response. This shows that the people think the society moves towards a more online approach as a mean to attract and get to the migrant youth, the target group.

Q5 - Within the scope of the project, which sports area of the target group do you support in particular?

Many of the respondents chose a team sport, such as football, basketball, rugby or volleyball. Some of the rest chose single sports, but that still require practices in a team or with other people such as swimming, dancing, fitness and martial arts. Only one person chose to write the following answer "I don't support a certain sport for the target group. I believe they should participate in sports that they enjoy".

Q6 - What would you suggest to encourage people to take up sports that are not very popular?

The respondents have given various answers and pieces of advice. The advice was either directly targeted towards the youth itself, either towards the entrepreneur. The answers are pretty different one from the other, raging from advising to start small and do little and easy things, to promoting the healthy lifestyle and the benefits of doing sports, either through discussions, either through games. Some respondents have suggested to engage more in non-formal activities or to reach out and even create communities for specific sports if there is a lack of. Others suggested to involve their friends as well, to emphasise on the importance of social development. Once piece of advice addressed to the entrepreneurs is to offer discounts or free trials in order to encourage the people to try a new sport. One respondent compared the sports to being a diamond – people need to keep practicing in order to get better and better, to "polish" it. The strongest advice was to not give up.

Q7 - What is the greatest benefit of increased participation of the target group in sport?

The majority of answers gravitated towards the social side of sports. Many respondents consider that one of the greatest benefits of increased participation of the target group in sports is the social inclusion. By doing sports in a community, it is easier to be socially integrated, to make connexions, to make friends and to meet reliable people. Others consider that the improvement of health is the biggest benefit to doing sports by the target group. Either through focusing on diet, better health or good mental health, many answers were related to the health side. One respondent also mentioned how sports can discipline a person and teach them "how to lose" and respect.

Q8 - What can low participation in sports lead to?

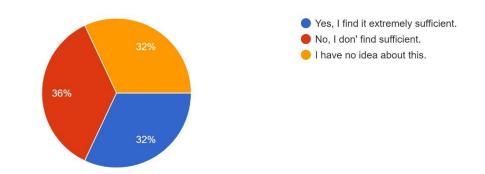

The majority of the respondents consider that low participation in sports leads to health issues. Either to obesity, to low self-esteem, to depression and lack of motivation, both areas of mental and physical health have been covered by the answers. Some respondents also consider that low involvement can lead to low social life, social exclusion, lack of support and lack of friends.

Q9 - What is the biggest obstacle of participation in sport?

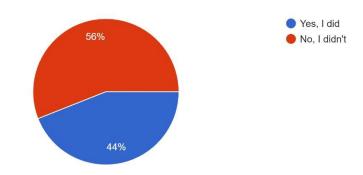

Majority of the respondents opted for the option of either "not being aware of opportunities" or "difficulty in accessing opportunities". Others had answers such as "comfort", "lack of funds to pay for equipment, lack of knowledge, lack of friends interested in sport", "being consistent in order to have results", "lack of motivation" and even "anxiety and fear of being judged". Thus with all the answers, once again both physical and mental sides of health have been mentioned.

Sweden

1. Do you think the participation of migrant youth aged 18-30 in Europe in sports activities is sufficient? 25 réponses

Among the 25 respondents, 36% (9 out of 25) expressed the opinion that the participation of migrant youth aged 18-30 in Europe in sports activities is not sufficient. This indicates a belief among this groupof respondents that more needs to be done to promote and enhance the involvement of migrant youth in sports. On the other hand, 32% of the respondents (8 out of 25) held the view that the participation of migrant youth in sports activities is indeed sufficient. These respondents likely perceive that there are already adequate opportunities and support for migrant youth to engage in sports. Another 32% of the respondents (8 out of 25) indicated that they did not have a clear opinion on the matter. These individuals may have been uncertain or lacked enough information to form a decisive stance on whether the participation of migrant youth in sports activities is sufficient.

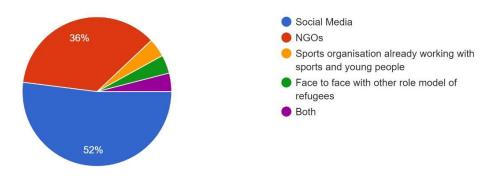

The majority of the respondents (56%) stated that they have never worked with the same target groupin the sports field. This implies that most of the respondents have not had previous experience working specifically with migrant youth in the sports domain. These respondents may have limited or no direct involvement in providing sports-related opportunities or support for this particular target group. On the other hand, 44% of the respondents indicated that they have previously worked with migrant youth aged 18-30 in Europe in the sports field. This suggests that a significant portion of the respondents have prior experience working with the target group in the context of sports-related activities.

3. If you worked before please give details.

The respondent worked with refugees to prevent them from becoming passive citizens before obtaining refugee status. They utilized sports to activate and engage the refugees. From 2014 to 2022, a respondent focused on the sport of hockey, involving approximately 20-25 participants in the activities. One respondent organized a successful volleyball match specifically for young migrant people. Some respondents engaged in social circus activities or provided language support through translation services and language classes. This effort ensured that language barriers did not hinder thetarget group's participation in sports activities. Respondent actively engaged with the community of the target group by attending local events, establishing partnerships with organizations, and collaborating with leaders. Workshops on peer mentoring have been organised, connecting them withindividuals who successfully integrated into the sports community or had similar backgrounds. This provided role models and mentors who shared experiences, offered guidance, and provided support. Collaboration played a vital role in the respondent's work. They partnered with local sports organizations, schools, community centers, and other stakeholders to expand opportunities for the target group in sports. This collaborative effort aimed to access resources, expertise, and funding to support the development and sustainability of sports programs.

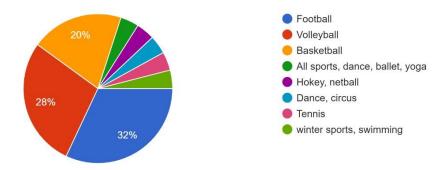

4. Which of the following is the most effective channel to reach the target group? ^{25 réponses}

52% of the respondents believe that social media is the most effective channel to reach the target group. This suggests that they consider platforms such as Facebook, Instagram, Twitter, or other social media platforms to be highly impactful in reaching and engaging with the target group effectively. 36% of the respondents indicated that NGOs (Non-Governmental Organizations) are the most effective channel. This implies that they believe organizations specializing in working with migrant youth or refugees have the necessary expertise, resources, and networks to effectively reach the target group by promoting and facilitating their participation in sports activities. 4% of the respondents stated that sports organizations already working with sports and young people are the most effective channel. Another 4% of the respondents indicated that face-to-face interaction with other role models of refugees

is the most effective channel. Lastly, 4% of the respondents believe that both social media and NGOs are equally effective channels to reach the target group. These findings suggest that social media, NGOs, and direct personal connections with role models or sports organizations all have their own perceived strengths and effectiveness in reaching the target group.

5. Within the scope of the project, which sports area of the target group do you support in particular?

Within the scope of the project, the respondent supports various sports areas of the target group. Thedata indicate that the highest percentage of support goes to football, with 32% of the respondents focusing on this sport. Volleyball and basketball are also prominent, with 28% and 20% support, respectively. Some respondents show a more diverse approach, with 4% supporting all sports, including dance, ballet, and yoga. Another 4% focus on a combination of hockey and netball, while another 4% support dance and circus activities. Additionally, 4% of the respondents specifically support tennis, and the same percentage extends their support to winter sports and swimming. Overall, the project seems to have a diverse range of sports supported, with a particular emphasis on football, volleyball, and basketball. Other activities like dance, ballet, yoga, hockey, netball, circus, tennis, winter sports, and swimming also receive varying degrees of support within the project's scope.

What would you suggest to encourage people to take up sports that are not very popular?

To encourage participation in less popular sports, suggestions include using social media for advertising, suggesting individuals try the sport and embracing potential failure, organizing open days and try out sessions, highlighting networking and health benefits, offering demo versions and combining with social events, inviting participation in sports sessions, hosting tournaments and free taster days, attending professional games, creating promotional content, ensuring accessible facilities and equipment, arranging introductory sessions or clinics, partnering with schools and educational institutions, fostering a sense of community through local tournaments,

engaging popular athletes and influencers, providing financial support or incentives, sharing inspiring athlete stories, partnering with local businesses, organizing experiential activities, and connecting the target group with successful athletes.

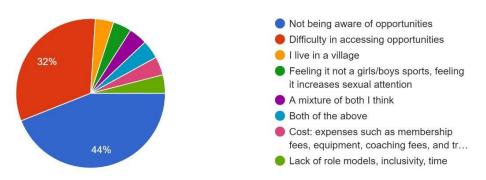

What is the greatest benefit of increased participation of the target group in sport?

Increased participation of the target group in sports can have several significant benefits, including integration into society and a sense of belonging, improved communication skills, getting off the streets and meeting new people, enhanced mental health, networking opportunities, stress relief, socialization, building relationships and bonds, making new friends, promoting a healthy lifestyle, teaching time management and discipline, fostering diversity and inclusion, improving cardiovascular health, muscular strength, and flexibility, maintaining a healthy weight, reducing the risk of chronic diseases, promoting social interaction and team building, developing lifelong friendships, establishing healthy habits and an active lifestyle, reducing healthcare costs, and creating a sense of unity and understanding among diverse individuals. It also provides physical and social benefits, helps with adaptation and sociability, and contributes to personal well-being and social connections.

What can low participation in sports lead to?

Low participation in sports can lead to various consequences such as lower average health, decreased interest and competition in the given sport, aggression, isolation, obesity, lack of motivation, decreased productivity, increased health problems, lack of coordination and teamwork, segregation or lack of network, limited opportunities to connect with other athletes, feeling unhealthy and lacking self-confidence, not connecting with peers, exclusion, not developing skills for later life, increased health issues like obesity and unhealthy living, sedentary lifestyles, and reduced mental well-being. It can also result in economic impacts and the loss of talented athletes. Additionally, physical inactivity can lead to decreased flexibility and energy levels.

9. What is the biggest obstacle of participation in sport? ^{25 réponses}

These findings highlight various barriers to sports participation, including lack of awareness, difficulties in accessing opportunities, living in rural areas, gender-related concerns, cost factors, and lack of role models and inclusivity. 32% of the respondents identified "Not being aware of opportunities" as the biggest obstacle. This suggests that a significant portion of the target group may not be aware of the available sports opportunities, programs, or events in their community. 44% of the respondents highlighted "Difficulty in accessing opportunities" as the main obstacle. This indicates that a substantial number of individuals face challenges in accessing sports opportunities, which could be due to factors such as limited availability of sports facilities, transportation issues, or lack of resources and support to participate in organized sports activities. 4% of the respondents mentioned that they live in a village. Living in a rural area, where sports infrastructure and resources may be limited, can pose a significant obstacle to participating in sports for individuals residing in these areas. Another 4% of the respondents expressed concerns about feeling that certain sports are not suitable for their gender or increase unwanted sexual attention. 4% of the respondents believed that a combination of both not being aware of opportunities and difficulty in accessing them is the biggest obstacle to sports participation. 4% of the respondents mentioned cost-related factors as the primary obstacle. Another 4% of the respondents cited a lack of role models, inclusivity, and time as obstacles to sports participation.
